

TROWEL APPLIED CONCRETE WALL FINISH

At 1/8"-1/4" thick, our trowel applied concrete wall finish provides the look of cast concrete without the bulk and weight of precast or cast-in-place concrete. It can be applied to various substrates to create a concrete finish on walls, columns, reception desks, benches, landscape elements, and fireplaces. Our expert technicians can achieve many different textures, including smooth, pitted, board formed, formwork, and more. Each project can be completely customized down to the color, finish, reveals, and inlays.

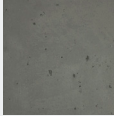

PRODUCT INFORMATION

- Standard and custom colors/finishes
- Durable and low maintenance
- Lightweight and seamless
- Rapid installation
- Cost effective
- Highly engineered
- Crack/impact resistant
- For commercial and residential use
- Qualifies for LEED v4.1
